

PRODUCT TECHNICAL BRIEF

KYKY ZQJ-3300 Helium Leak Detector - LeakLab Integration Package

KYKY ZQJ-3300 Helium Leak Detector - LeakLab Integration Package - LeakLab solutions for leak testing, vacuum systems and test equipment.

Technical and Project Information

Cart-mounted KYKY ZQJ-3300 helium mass-spectrometer leak detector supplied as an application-specific LeakLab integration package. Pumping, interfaces, accessories, documentation and acceptance testing are fixed in the approved project specification.

The ZQJ-3300 is KYKY's cart-mounted helium mass-spectrometer platform for fast quantitative leak testing and production integration. The LeakLab package adapts the instrument to a defined test object, cycle and documentation scope; it is not presented as a separate manufacturer model.

Project scope can include

- Vacuum-method and sniffer-test accessories selected for the application
- Backing-pump, inlet-valve and fixture integration
- Remote I/O and data connection to a production cell
- English operating documentation, method development and operator training
- Reference leak and calibration or acceptance-test package where specified

KYKY describes the ZQJ-3300 as a high-sensitivity cart-mounted detector with fast response, extensive communication interfaces and automated operation. The manufacturer also identifies it as part of its newer helium leak-detector generation with algorithmic signal processing and rapid helium clearing.

Numeric performance, pump type, inlet pressure, dimensions, interface set and included accessories must be taken from the current manufacturer quotation for the ordered serial configuration. No unsupported claim of exclusive representation, national-register status or universal legal traceability is made.

WORLDWIDE PROJECT CONTACT

Send the test object or system, operating conditions, target sensitivity or pressure range, applicable standard, destination country, quantity and schedule. LeakLab will review the project scope.
